

Cameron Gray - Full Stack Developer

UK · cameronjgray.com · this@cameronjgray.com

Professional Profile

Full Stack Developer with a track record of taking projects from greenfield to production at early and growth-stage startups, including taking one to acquisition. I've been given ownership of high-impact projects - from full rebuilds to cross-functional integrations - and have consistently taken on greater scope and responsibility at each company I've worked at. I work comfortably across the stack with a backend focus, and I'm at my best when an ambiguous problem needs structuring and shipping. Outside of work I run a personal Arch Linux server hosting my own services, which keeps me close to the systems-level thinking that feeds back into my engineering work.

Core Skills

Languages & Frameworks: Node.js / Typescript · React.js / React Native · Bash ·
Additional exposure: Python, PHP, C/C++

Cloud & Infrastructure: AWS (Lambda, S3, IAM, CloudWatch, API Gateway, SQS) · GCP (Cloud SQL, Pub/Sub, Firestore) · Docker · IaC (CDK) · SQL / Postgres

Engineering Practice: API Design (REST, GraphQL) · Authentication & Authorisation · Third-party integrations · Software Architecture · Software Security · SaaS / Multi-tenant systems

Career Summary

Swap Commerce - Software Developer, *London, Remote* (December 2025 - Present)

Technologies: Node.js, Typescript, GCP (Cloud SQL, Pub/Sub, Firestore)

- Part of the Enablement Core team, building foundational systems and developer tooling that other engineering teams across the company depend on
- Contributing to the data layer and the central authentication & storage service used by all product teams
- Maintain internal npm packages and a shared security service

Vault Platform - Full Stack Developer, *London, Remote* (September 2023 - June 2025)

Technologies: React.js, Typescript, Node, SQL, GraphQL, Sequelize, Docker, AWS, React Native

- One of the core engineers behind the platform acquired by Diligent in June 2025
- Promoted during tenure in recognition of project leadership and consistent delivery
- Helped oversee the onboarding of ING as an enterprise customer, supporting ~70,000 users
- Technical lead on multiple cross-functional projects, working directly with product, design and customer-facing teams to ship features tied to revenue

- Co-led the Slack integration - a long-running, business-critical project covering infrastructure, security and product decisions - enabling customers to manage and create reports without leaving Slack
- Maintained the management portal and the full set of user intake channels (web app, mobile app, and automated phone lines), which formed the core of the Vault product

Plastic Pipe Shop - Freelance Developer, *Stirling, Remote* (June 2023 - September 2023)

Technologies: Node, AWS (Lambda, S3, CDK), Docker

- Sole developer on a three-month engagement to design and ship a service that auto-generates product specification PDFs, replacing a manual document-creation process
- Owned the project end-to-end: architecture, infrastructure-as-code (CDK), deployment, and handover

Procuros GmbH - Full Stack Developer, *Hamburg, Remote* (January 2022 - May 2023)

Technologies: React.js, Typescript, PHP, Docker, AWS

- Primary frontend developer on the three-engineer team that rebuilt the customer portal from the ground up, contributing to codebase-wide architectural decisions
- Built the email magic-link system used in production by customers to create orders, shipping notices and invoices - a core part of the product

Incentive Games - Full Stack Developer, *Edinburgh, Remote* (May 2020 - December 2021)

Technologies: React.js, Typescript, Node.js, SQL, AWS

- Joined an early-stage engineering team (~6 people, no dedicated project managers) and was part of the team through scaling to ~30
- Took ownership of software security across the game suite following external penetration testing
- Built and maintained multiple games across the company's game suite, working from initial spec through to production release

Education

University of Stirling, UK - BSc Computing Science (Hons), **First Class**

- September 2015 - June 2019
- Course languages: Java (primary), Python, C/C++
- Dissertation: *Using Machine Learning to Identify Fake Images* - built a TensorFlow-based classifier using neural networks to detect tampered images, with a PHP web frontend to make the model accessible to non-technical users
